

Plus energy building tours

One day plusenergy building visiting tours

Each tour shows the exterior of 3 - 7 plus energy buildings and how they are embedded in the landscape. All buildings produce on-site totally more energy (solar thermal, photovoltaics and geothermal energy) than they need totally for heating, cooling and electricity on an annual basis. Switzerland belongs to the 3 globally leading countries for plus energy buildings. Switzerland has probably already more than 100 hundred of such buildings. Plus energy buildings are one important technology to replace in short-term fossil and nuclear electricity and fossil fuels for heating and cooling.

Delivery: Photoshooting possibilities with building envelope (outside building), selfie option
Explanation plus energy concept
applied energy production technologies
annual energy balance
type of usage of building
important natural and bureaucratic constraints
Transportation
Drinks and snacks

Starting point: To be negotiated

Starting time: To be negotiated

End time: To be negotiated

Tour types New residential buildings
Refurbished residential buildings
New non-residential buildings
Old non-residential buildings

Requirements: Valid passport and visa for Switzerland
Sturdy shoes and rain protection
Ability to walk some 5 - 10 km per day and tour

Price: upon request

Organizer: Renewables-Now SA
rue des Annonciades 21
